Integration of Chatbot with HTML web page:

The screenshot displays the IBM Watson Assistant Lite interface for configuring a chatbot named 'Smart Fashion'. The interface is divided into three main sections:

- Conversation steps:** A list of steps to define the chatbot's logic. Step 1 asks for the customer's first name to set up a meeting. Step 2 asks for the last name. Step 3 asks for an email address to send a calendar invite. Each step has a 'Continue to next step' button.
- Customer starts with:** A list of phrases that trigger the chatbot's actions. The phrases include: 'Enter a phrase', 'I would like to discuss my situation face to face', 'I want to talk in person with someone about my case', 'Is it possible to set a date?', 'Looking for a dress', and 'Suggest me a dress'.
- Preview:** A simulated chat window showing the chatbot's responses to user input. The chatbot recognizes the phrase 'Suggest me a dress' and responds with 'To set up a meeting, I'll need a few details. First, what's your first name?'.

The interface also includes a 'New step' button and a 'Copy link to share' button.

The screenshot displays the IBM Watson Assistant Lite interface for previewing a chatbot integrated into a website. The interface is divided into two main sections:

- Preview assistant:** A large image of a man in a denim jacket standing in a flower shop, with the text 'NEW ARRIVALS' at the bottom. The chatbot is overlaid on the right side of the image.
- Chatbot interface:** A simulated chat window showing the chatbot's responses to user input. The chatbot recognizes the phrase 'Suggest me a dress' and responds with 'To set up a meeting, I'll need a few details. First, what's your first name?'.

The interface also includes a 'Copy link to share' button and a 'Change background' button.
