Project Name	Smart Fashion Recommender Application		
Team ID	PNT2022TMID16242		
Create a Flask App			

## Solution:

```
from flask import Flask, render_template
app = Flask(_name_) @app.route("/signin")
def sign_in():
    return render_template("signin.html")
@app.route('/signup')
def sign_up():
    return render_template("signup.html")
@app.route('/')
def home():
    return render_template("home.html")
@app.route('/about')
def about():
    return render_template("about.html")if
name__ == '__main__':
    app.run(debug=True)
```

# Add the Home page, About Page

## Solution:

```
<body background="C:\Users\Rakesh\Desktop\Ass\img\img1.jpg"</pre>
    style="background-size: cover;">
        <!-- NAVBAR -->
        <nav class="navbar navbar-</pre>
            expand bg- light"> <div</pre>
            class="container-fluid">
               <a class="navbar-
    brand" href="./"> <strong>Smart Fashion Recommender
    Application</strong
    > </a>
               <a class="nav-link active" href="/">Home</a>
                      <a class="nav-link active"</pre>
                      href='C:\Users\Rakesh\Desktop\Ass\about.html'>Ab
     Us</a> 
    a> 
    nup</a> 
class="nav-item">
<a class="nav-link active"</pre>
href="C:\Users\Rakesh\Desktop\Ass\signin.html">Signin/
    class="nav-item">
        <a class="nav-link active"</pre>
        href="C:\Users\Rakesh\Desktop\Ass\signup.html">Sig
               </div>
        </nav>
```

```
<script
      src="https://cdn.jsdelivr.net/npm/bootstrap@5.1.3/dist/js/b
      ootstrap.bundle.min.js"></script>
      <br/>
      <h1 style="text-
      align: center; color: rgb(87, 0, 250); ">Smart Fashion Recommender
      Application</h1>
      255); font-weight: 900; font-
      size:60px; font">Welcome to Smart Fashion Recommender
      Application 
      </body>
      </html>
      About page:
<!DOCTYPE html>
<html lang="en">
<head>
          <meta charset="UTF-8">
          <meta http-equiv="X-UA-Compatible" content="IE=edge">
          <meta name="viewport"</pre>
      content="width=device-width,initial-
      scale=1.0">
          <title>Document</title>
      </head>
      <body
      background="C:\Users\Rakesh\Desktop\Ass\img\img2.jpg"style
      ="background-size: cover;">
          <h1 style="text-align: center;">About us</h1>
          serif;font- size: large;">Retailers worldwide have started
```

```
whether and to what extent (i) the sensing capabilities of smart fashion retail environments and (ii) the

integration of contextual information can improve the quality of such recommendations. To this end,

we consider smart fitting rooms with the ability to detect products and customers as a showcase; a

transaction dataset from a leading German fashion retailer; and contextual information about the time

of purchase, the store type, and the weather conditions. Our preliminary analyses indicate that sensor information regarding garment and user identification, as wellas further context data help to improve

product recommendations in fashion stores.
```

#### Add the Bootstrap

```
1 <!-- Connect Bootstrap -->
2 <link
3    href="https://cdn.jsdelivr.net/npm/bootstrap@5.1.3/dist/css/bootstrap.min.css"
4    rel="stylesheet"
5  />
```

Add the Sign in page and App the Signup Page + database connectivity

Solution:

## Sign in page:

```
<!DOCTYPE html>
<html lang="en">
<head>
```

```

# About us

Retailers worldwide have started deploying smart service innovations in their stores to regain market share lost to online competitors. Against this backdrop, this paper focuses on the design of product recommendation systems for fashion stores. Our research particularly aims at answering the issues of whether and to what extent (i) the sensing capabilities of smart fashion retail environments and (ii) the integration of contextual information can improve the quality of such recommendations. To this end, we consider smart fitting rooms with the ability to detect products and customers as a showcase; a transaction dataset from a leading German fashion retailer; and contextual information about the time of purchase, the store type, and the weather conditions. Our preliminary analyses indicate that sensor information regarding garment and user identification, as well as further context data help to improve product recommendations in fashion stores.
